Zimbabwe	FV	14	0.14%
TOTAL (ECAC)	131 (43)	10,337 (7,331)	100% (70..92%)

(*) = number of inspections in relation to total number of inspections (%) conducted during the time period being considered in this report

As mentioned earlier there is no discrimination between operators certified in the 43 EU / ECAC States (indicated in bold) and operators certified in the other non-European States. The fact that inspections on ECAC operators account for almost two thirds of the total number of inspections is a direct consequence of the fact that a vast portion of European air traffic is performed by operators from those states.

Appendix C - Aircraft types inspected (by manufacturer)

(listed in alphabetical order)

Large airliners (over 100 seats)

No.	Aircraft Manufacturer
1	AIRBUS
2	ANTONOV
3	BOEING
4	BRITISH AEROSPACE
5	EMBRAER
6	FOKKER
7	ILYUSHIN
8	LOCKHEED
9	MCDONNELL DOUGLAS
10	TUPOLEV
11	YAKOVLEV

Regional airliners (19-99 seats)

No.	Aircraft Manufacturer
1	ANTONOV
2	AVIONS DE TRANSPORT RÉGIONAL
3	BOMBARDIER AEROSPACE
4	BRITISH AEROSPACE
5	CONVAIR
6	DORNIER
7	EMBRAER
8	FAIRCHILD
9	FOKKER
10	LET

11	LOCKHEED
12	SAAB
13	YAKOVLEV

Commuter, business and general aviation aeroplanes

No.	Aircraft Manufacturer
1	BEECH
2	BOMBARDIER AEROSPACE
3	BRITTEN-NORMAN
4	CESSNA
5	DASSAULT
6	DIAMOND AIRCRAFT INDUSTRIES
7	DORNIER
8	FAIRCHILD
9	GULFSTREAM
10	ISRAEL AIRCRAFT INDUSTRIES
11	MITSUBISHI
12	PIAGGIO
13	PIPER
14	RAYTHEON
15	ROCKWELL
16	SHORT BROTHERS
17	SOCATA
18	SOKOL

Helicopters

No.	Aircraft Manufacturer
1	AEROSPATIALE
2	AGUSTA

3	BELL HELICOPTER TEXTRON
4	EUROCOPTER
5	KAMOV OKB
6	ROBINSON HELICOPTER COMPANY

The distribution of SAFA inspections by aircraft manufacturers is in line with the volume of traffic performed with the respective types. During 2008, inspections covered also general aviation and helicopter operations, but the vast majority concentrated on commercial operations with aeroplanes.

Appendix D – Operators inspected

(listed in alphabetical order)

Operator Name	Operat or Code	State of Operator

Appendix E – Results (findings & inspections) per inspection item

Inspection item	Description	No. of times inspected (III)	No. findings (F)	F/III
A. Flight Deck/General	A01 General Condition	9072	190	2.09%
	A02 Emergency Exit	6754	8	0.12%
	A03 Equipment	5936	62	1.04%
Documentation	A04 Manuals	4762	202	4.24%
	A05 Checklists	5418	176	3.25%
	A06 Radio Navigation Charts	6593	404	6.13%
	A07 Minimum Equipment List	6255	460	7.35%
	A08 Certificate of registration	9501	131	1.38%
	A09 Noise certificate (where applicable)	9182	128	1.39%
	A10 AOC or equivalent	9248	323	3.49%
	A11 Radio licence	9312	134	1.44%
	A12 Certificate of Airworthiness	9517	57	0.60%
	Flight data	A13 Flight preparation	6987	475
A14 Weight and balance sheet		5925	418	7.05%
Safety Equipment	A15 Hand fire extinguishers	7679	51	0.66%
	A16 Life jackets / flotation device	7142	51	0.71%
	A17 Harness	7362	37	0.50%
	A18 Oxygen equipment	6591	38	0.58%
	A19 Flash Light	6447	64	0.99%
Flight Crew	A20 Flight crew licence	8912	579	6.50%
Journey Log Book / Technical Log or equivalent	A21 Journey Log Book, or equivalent	6930	55	0.79%
	A22 Maintenance release	6749	45	0.67%
	A23 Defect notification and rectification	6700	353	5.27%
	A24 Preflight inspection	6143	61	0.99%
	B. Safety / Cabin	B01 General Internal Condition	8191	398
B02 Cabin Attendant's station and crew rest area		6112	138	2.26%
B03 First Aid Kit/ Emergency medical kit		6631	228	3.44%
B04 Hand fire extinguishers		6962	108	1.55%
B05 Life jackets / Flotation devices		6540	113	1.73%
B06 Seat belts		7167	146	2.04%
B07 Emergency exit, lighting and marking, torches		6385	333	5.22%
B08 Slides /Life-Rafts (as required)		4896	77	1.57%
B09 Oxygen Supply (Cabin Crew and Passengers)		5518	135	2.45%
B10 Safety Instructions		6853	222	3.24%

Inspection item	Description	No. of times inspected (III)	No. findings (F)	F/III
	B11 Cabin crew members	5190	31	0.60%
	B12 Access to emergency exits	6305	251	3.98%
	B13 Safety of passenger baggage	2773	35	1.26%
	B14 Seat capacity	3996	3	0.08%
C. Aircraft Condition	C01 General external condition	8640	1596	18.47%
	C02 Doors and hatches	8438	173	2.05%
	C03 Flight controls	8303	82	0.99%
	C04 Wheels, tyres and brakes	8486	274	3.23%
	C05 Undercarriage	8183	328	4.01%
	C06 Wheel well	7579	181	2.39%
	C07 Powerplant and pylon	8069	418	5.18%
	C08 Fan blades	7006	38	0.54%
	C09 Propellers	757	12	1.59%
	C10 Obvious repairs	7915	70	0.88%
	C11 Obvious unrepaired damage	7677	104	1.35%
	C12 Leakage	8139	356	4.37%
D. Cargo	D01 General condition of cargo compartment	5522	383	6.94%
	D02 Dangerous Goods	623	50	8.03%
	D03 Safety of cargo on board	2861	418	14.61%
E. General	E01 General	1212	95	7.84%

Appendix F.1 – Inspection items concerning the flight deck

Ratio number of findings per inspections: flight deck items

F.1.1 – Minimum equipment list (MEL)

The MEL specifies the circumstances under which an aircraft may be operated in spite of certain equipment being inoperative. The MEL is established by the aircraft operator and approved by the responsible State of Operator. The majority of the findings concerned the lack of evidence of approval of the MEL, the MEL not being carried onboard or being out of date. Also in many cases instead of the MEL the MMEL (Master MEL) is being used. The MMEL is established by the aircraft manufacturer as a baseline document for the operator to establish the MEL.

F.1.2 – Weight and balance sheet

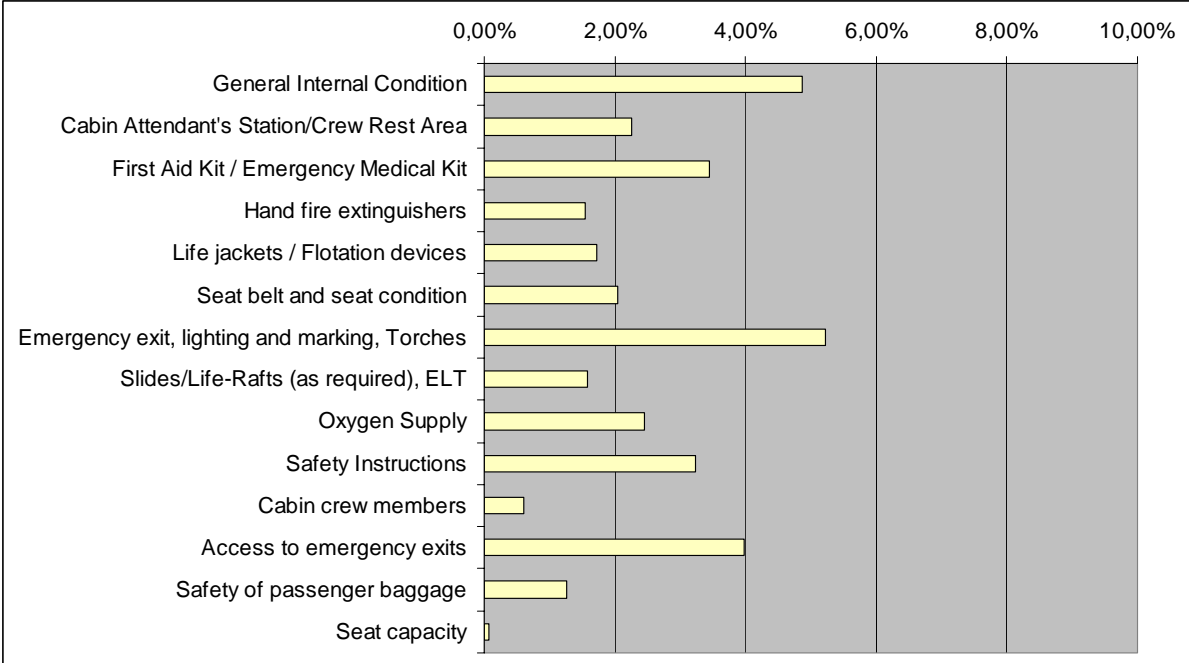

Aircraft have to be loaded such as their operation conforms with the manufacturer's limitations regarding weight and balance (position of centre of gravity). Findings identified under this inspection item revealed insufficient data available to flight crew to check the correctness of weight and balance sheet, discrepancies between data presented in the sheet and the on-board manuals or even incorrect weight and balance sheets. When inspectors identified that the safe operation of an aircraft might be jeopardised corrective measures were required prior to the departure of the aircraft: re-calculation of the weight and balance sheet, offloading of cargo or fuel.

F.1.3 – Flight preparation

Flight preparation is an important part of the flight during which the crew is studying the flight relevant information: weather forecast, NOTAMs (Notice to Airmen) for en-route as well as for landing and alternate aerodromes and is preparing the Operational Flight Plan

(OFP). The findings vary from minor findings (e.g. OFP not signed by the Pilot in Command) to findings having a significant (e.g. no or incorrect fuel monitoring) or major impact on safety (e.g. incomplete flight preparation, no or incomplete set of NOTAMs). In case of major (cat. 3) findings, SAFA inspectors imposed immediate corrective actions before the flight could commence.

Appendix F.2 – Inspection items concerning the passenger cabin

Ratio number of findings per inspections: cabin & safety items

F.2.1 - Emergency exits, lighting and marking, torches

The findings mainly concerned emergency exit lights which were not functioning properly, torches (flashlights) which were not available, in poor condition or not available in sufficient quantity and non-installation or inadequately functioning of floor proximity (emergency) escape path marking systems. These systems indicate the location of the emergency exits. They are important especially when there is a fire or smoke in the passenger cabin or when the normal cabin lights are not functioning. In case of major findings the aircraft were allowed to depart after the findings were eliminated or, depending on the circumstances, in accordance with an operational restriction (for example in case of an unserviceable emergency exit some passengers would have to be offloaded).

F.2.2 - General internal condition

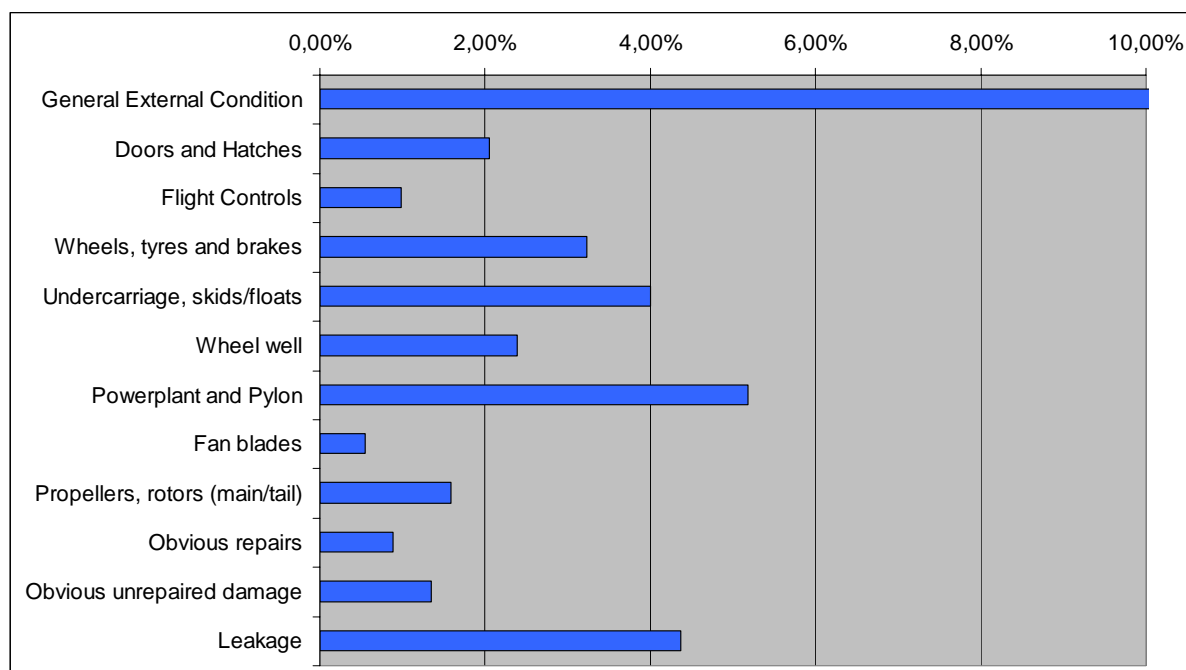

The cabin crew members have to be able to perform their normal and abnormal duties without hindrance. The findings mainly revealed the poor condition of the cabin, loose carpeting impeding the crew to perform their duties, improper stowed luggage, catering equipment not correctly secured.

F.2.3 – Access to emergency exits

International standards require aircraft to provide means for the rapid evacuation of passengers in case on an emergency. Findings revealed under this item include emergency exits blocked by luggage or seats. Most of the times the deficiencies were corrected prior to the departure of the aircraft either by removing the blockage or by redistributing the passengers so they can use other emergency exits.

Aircraft engaged in international air traffic have to be equipped with adequate medical supplies appropriate to the number of passengers. Usually the medical supplies should comprise at least one first aid kit (FAK) and, in case of aeroplanes carrying more than 250 passengers, a medical kit. The findings identified under this inspections item revealed that sometimes the FAK was not at the indicated position, not properly marked or its contents have passed the expiration date.

Appendix F.3 – Inspection items concerning general condition of aircraft

Ratio number of findings per aircraft condition & cargo items

– F.3.1 – General external condition

Checking the general external condition means checking for apparent corrosion, cleanliness, presence of ice, snow, frost; legibility of markings, windshield delamination, damages, exterior lights etc. The majority of the findings concerned paint damage, illegible or missing safety markings, unserviceable exterior lights, missing or loose screws.

– F.3.2 – Leakage

Under this inspection item SAFA inspectors check for leakages of the numerous aircraft systems: hydraulic, fuel, oil, and lavatory. Once such a finding is identified it is always assessed against the relevant standards of the aircraft manufacturer. If the leakage is exceeding the limits the aircraft is dispatched only after the leakage is rectified.

– F.3.3 – Powerplant and pylon

The engine, the engine housing, the pylon (attachment of the engine to the wing or aircraft structure) and the access panels in the engine housing and pylon are carefully inspected. Findings reported relate to missing rivets in engine housing and damage of acoustic panels in the engine intake area.

Appendix F.4 – Inspections concerning cargo compartment

F.4.1 - Safety of cargo on board

In several cases it was established that cargo in the cargo holds was not properly secured. Heavy items were not restrained, which might lead to damage of the aircraft in case of rapid acceleration / deceleration. In other cases, barrier nets were either not installed or in poor condition. Cargo containers and pallets were in poor condition. Locks to secure the containers were not in the proper position or unserviceable. Depending on severity of the findings corrective actions imposed by inspectors included: relocation or reloading of cargo, off-loading of unserviceable cargo pallets.

F.4.2 – Dangerous goods

"Dangerous Goods" are certain types of material/s needing special care and treatment because they are flammable, toxic, poisonous, etc. When properly packed, stored, labelled, protected etc., Dangerous Goods may be transported. Findings that have been recorded included improper storage and labelling of the Dangerous Goods carried onboard, unavailability of the required documents and manuals (Emergency Response Guide), missing authorisation for the transportation of Dangerous Goods and no proper notification to the Captain (NOTOC) of Dangerous Goods carried onboard. In those cases when major (cat. 3) findings have been identified the aircraft was allowed to depart only after corrective actions have been carried out (e.g. offloading of dangerous goods, repackaging and labelling).

F.4.3 – General condition of cargo compartment

Findings related to the general condition of the cargo compartment, such as damage to panels, deficiencies with the locking system, improper repairs of panels, and missing separation nets.
